

## श्री चित्रा तिरुवाल आयुर्विज्ञान और प्रौद्योगिकीसंस्थान, तिरुवनंतपुरम् -11 SREE CHITRA TIRUNAL INSTITUTE FOR MEDICAL SCIENCES & TECHNOLOGY, THIRUVANANTHAPURAM—695 011

## **ENTRANCE EXAMINATION:**

**ACADEMIC SESSION JANUARY 2020** 

PROGRAM: Advanced Certificate Program in Physiotherapy

Time: 90 minutes

Max.Marks: 100

(Select the most appropriate answer)
(There are no negative marks for wrong answers)

- 1. Which of the following patient complaints should have the highest priority for medical intervention?
  - a) A home therapy patient reports, "I am starting to have breakdown of my heels."
  - b) A patient who had an upper extremity cast yesterday reports, "I can't feel my fingers in my right hand today."
  - c) A young female report I think "I sprained my ankle about 2 weeks ago."
  - d) A middle-aged patient reports,"My knee is still hurting from the TKR."
- 2. 22 year old male athlete reports pain with running and has a sharp pain over the patellar tendon, particularly on the tibial tubercle. Which of the following disorders is MOST likely present?
  - a) Legg-Calvé-Perthes' disease
  - b) Chondromalacia patellae
  - c) Osgood-Schlatter disease
  - d) Pes anserine bursitis
- 3. The difficulty with rapid alternating movements while performing neurologic testing is describe as
  - a) Ataxia
  - b) Dysmetria
  - c) Dysarthria
  - d) Dysdiadocokinesia
- 4. A patient is receiving cardiac rehab and has a heart rate of 110 during moderate intensity exercise. The patient reports a 16 on the Borg RPE scale. Which class of heart medications is MOST likely present?
  - a) Beta Blockers
  - b) Angiotensin-Converting Enzyme (ACE) Inhibitors
  - c) Calcium Channel Blockers
  - d) Angiotensin II Receptor Blockers
- 5. In a person with a transfemoral amputation, an abnormal prosthetic gait with lateral trunk bending toward the involved side in midstance most commonly occurs with hip
  - a) adductor weakness
  - b) extension contracture
  - c) flexion contracture
  - d) abductor weakness
- 6. Degenerative bone disease is called as?
  - a) Osteoarthritis
  - b) Rheumatoid Arthritis
  - c) Gouty arthritis
  - d) Synovitis

- 7. While treating a patient for cardiac rehab, a physical therapist relies on the Borg RPE scale. The Borg rating of perceived exertion scale (RPE) is MOST representative of which type of data scale?
  a) Nominal
  b) Ordinal
  c) Cardinal
  d) Marginal
  - 8. Damage to the ulnar nerve at the medial epicondyle would give loss of
    - a) Abduction of the thumb
    - b) Cutaneous sensation on the lateral side of the hand
    - c) Abduction of the fingers
    - d) Flexion of the second proximal interphalangeal joint
  - 9. Golfer's elbow is
    - a) Medial epicondylitis
    - b) Lateral epicondylitis
    - c) Bicipital tendonitis
    - d) Olecranon bursitis
- 10. What is the most frequent cause of stroke?
  - a) Intracranial hemorrhage
  - b) Large vessel thrombosis
  - c) Cerebral embolism
  - d) Vasculitis
- 11. During prolonged (90 or more minutes) exercise, the preferred energy source for skeletal muscle is:
  - a) Plasma glucose
  - b) Plasma fatty acids
  - c) Muscle triglycerides
  - d) Muscle glycogen
- 12. The order of motor unit recruitment during a skeletal muscle contraction of increasing force is:
  - a) Type IIb →Type IIa →Type I
  - b) Type IIa →Type IIb →Type I
  - c) Type I → Type IIb → Type II
  - d) Type I → Type IIa → Type IIb
- 13. The ability to rapidly and smoothly initiate, stops, or modify movements while maintaining postural control is known as
  - a) Agility
  - b) Dexterity
  - c) Adaptation
  - d) Ataxia
- 14. All of the following are true EXCEPT: Asthma can interfere with exercise by
  - a) Increasing the work of breathing
  - b) Cold-induced bronchial muscle spasm
  - c) Limiting alveolar ventilation
  - d) Reducing the oxygen carrying capacity of the blood

- 15. A 43-year-old runner presents with right-sided hip pain. On examination, you note tenderness to palpation over the greater trochanter on the affected side. No focal neurologic deficits are noted and no other areas of tenderness are elicited. A key part of your treatment plan should include strengthening of the hip
  - a) internal rotators
  - b). extensors
  - c) abductors
  - d) adductors
- 16. Therapeutic intervention that focuses on moving the less impaired limb while watching its mirror reflection is known as?
  - a) Mental imagery
  - b) Virtual reality
  - c) Mirror therapy
  - d) Constraint induced therapy
- 17. A patient reports pain around the anterior aspect of the calcaneus extending toward the 2nd metatarsal head. The patient has the most pain when first standing up after waking which gradually lessens throughout the day. The patient has recently begun a walking program. Which of the following disorders is MOST likely present?
  - a) Medial deviation of the 1st metatarsal
  - b) Metatarsalgia
  - c) Tarsal tunnel syndrome
  - d) Plantar fasciitis
- 18. A person left CVA and right lower extremity hemipares issues a quad cane. He should be instructed to
  - a) Place the cane in the patient's left upper extremity, encourage cane, then right lowerextremity, then left upper extremity gait sequence.
  - b) Place the cane in the patient's left upper extremity, encourage cane, then left lowerextremity, then right upper extremity gait sequence
  - c) Place the cane in the patient's right upper extremity, encourage cane, then right lower extremity, then left upper extremity gait sequence.
  - d) Place the cane in the patient's right upper extremity, encourage cane, then left lowerextremity, then right upper extremity gait sequence.
- 19. Functional Electrical Stimulation (FES) is useful in the following EXCEPT
  - a) Caudaequina Syndrome for foot dorsiflexion
  - b) Hemiplegia for shoulder abduction
  - c) Hemiplegia for gait training
  - d) Wrist extension and finger release in spastic hand
- 20. Which risk factor is most clearly implicated in the development of degenerative lumbar diskogenic disease?
  - a) Hyperlordosis
  - b) Smoking
  - c) Body build
  - d) Posture
- 21. Ischial containment prosthesis is used for
  - a) Above knee amputation
  - b) Above elbow amputation
  - c) Below knee amputation
  - d) Symes amputation

a) 3.5 ml/kg/min		•
b) 3 ml/kg/min		
c) 4.5 ml/kg/min		
d) 5 ml/kg/min		
23. A patient presents with rheumatoid arthrit		
metacarpophalangeal joint, hyperextended p		
interphalangeal joint. Which of the following is	the MOST accurate description of the p	OSITION
a) Swan neck deformity		
b) Boutonniere deformity		
c) Mallet finger deformity		
d) De Quervain syndrome		
24. Seronegative inflammatory arthritis conditions h	nave a primary effect on	
a) Axial skeleton		
b) Lumbar spine		
c) Big joints of the body		
d) Smaller joints of the body		
25 Caiff land on the character of land		
25. Stiff knee gait is characterized by		
a) Lurching		
b) Hand to knee		
c) Hip hiking d) Steppage gait		
a) Steppage gait	•	
	·	
26. The advantages of group therapy		
a) Time saving for therapist	•	
b) Builds up confidence in patients		
c) Maximizes patient's effort and develop com	petition among the patients	
d) All the above		
•		
27. Serum uric acid level is higher in		•
a) SLE	·	
b) Stills disease		
c) Gout		
d) None of the above		
20 American II and a let a control of the control o		sadiciali afalia
28. A patient has just undergone a total hip replacer	• • • • • • • • • • • • • • • • • • • •	wnich of the
following combinations of movements of the hip	are MOST important to avoid?	
a) Extension, medial rotation, and abduction.		
b) Extension, external rotation, and adduction.		
<ul><li>c) Flexion, medial rotation, and adduction.</li><li>d) Flexion, external rotation, and abduction</li></ul>		
u) Flexion, external rotation, and abduction		
29. Normal range of motion of shoulder abduction is	•	
a) 180 degree	<b>,</b>	•
b) 90 degree		
c) 160 degree		
d) 270 degree		
-///		

22. The oxygen uptake corresponding to one MET is

<ul> <li>a) Larger racquet head</li> <li>b) Larger handle diameter</li> <li>c) Increased string tension</li> <li>d) Stiffer racquet</li> </ul>	
31. A physical therapist teaching a patient with COPD pulmonary exercises should do	which of the
following?	
<ul><li>a) Teach purse-lip breathing techniques.</li><li>b) Encourage repetitive heavy lifting exercises that will increase strength.</li></ul>	
c) Limit exercises based on respiratory acidosis.	
d) Take breaks every 10-20 minutes with exercises.	•
32. Which cardio respiratory outcome would you expect from an elderly person part aerobic program?	cipating in ar
a) A decrease in VO2max but an increase in walking speed	
b) No change in tolerance during activities of daily living	
<ul><li>c) Improvement in VO2max</li><li>d) No change in stroke volume and a reduction in systemic vascular resistance</li></ul>	
d) No change in stroke volume and a reduction in systemic vascular resistance	
33. Tissue repair phases according to chronological order is	
a) Bleeding, Proliferation, Inflammation and Remodeling	
b) Bleeding, Inflammation, Proliferation and Remodeling	
c) Bleeding, Inflammation, Remodeling and Proliferation	
d) Remodeling, Proliferation, Inflammation and Bleeding	
34. Which of the following is not a sign of increased intracranial pressure?	
a) Bradycardia	
b) Increased pupil size bilaterally	
c) Change in LOC	
d) Vomiting	
and the second control of the second control of the second control con	
35. Which fibers transmit poorly localized, dull, visceral pain to the spinal cord?	
a) Myelinated A-alpha b) Myelinated A-delta	
c) Unmyelinated gamma	
d) Unmyelinated C	
36. Double support phase present at the phase of gait cycle.	
a) Beginning of stance	
b) End of stance	
c) Beginning and end of stance	
d) Mid stance	
37. The component motion for ankle dorsiflexion is	
a) anterior glide of talus on the mortise	
b) posterior gliding of talus in the mortise	
c) compression of inferior tibiofibular joint	
d) inversion of talus	

30. Which equipment modification is suitable for a tennis player with lateral epicondylitis?

- 38. Gait cycle begins with a) Midstance b) Toe off c) Heel strike d) Intial swing
- 39. Frenkel's exercise are done to improve function in
  - a) Cerebellar dysfunction
  - b) Amoutations
  - c) Spinal cord injury
  - d) Muscular dystrophy
- 40. Force production by a skeletal muscle can be increased by
  - a) Recruiting more motor units
  - b) Increasing the frequency of stimulation of a motor unit by the  $\alpha$ -motor neuron
  - c) Setting the muscle at its optimal length
  - d) All of the above
- 41. A patient who has suffered a cutting injury to the entire left half of the spinal cord at the T8 level is being examined by a physical therapist. Which of the following impairments would be MOST apparent on the ipsilateral lower extremity?
  - a) Loss of pain and temperature sensation
  - b) Loss of movement and light touch sensation
  - c) Loss of peripheral smooth muscle control
  - d) Loss of coordination and accuracy.
- 42. Lateral curvature of the spine is known as
  - a) Kyphosis
  - b) Lordosis
  - c) Ankylosis
  - d) Scoliosis
- 43. Exercises in which contraction of muscle occur without change in muscle length is known as
  - a) Isotonic exercise
  - b) Isometric exercise
  - c) Isokinetic exercise
  - d) Excentric exercise
- 44. Autonomic dysreflexia is triggered by
  - a) intermittent catheterization
  - b) pregnancy
  - c) Appendicitis
  - d) All the above
- 45. Fluidotherapy, whereby warm air is circulated through a bed of fine-grained cellulose particles is an example of
  - a) Conduction
  - b) Convection
  - c) Radiation
  - d) Conversion

	heneurotransmister released at the neuromuscula ) Norepinephrine	
	) Epinephrine	
	) Acetylcholine	
	i) cyclic AMP	
	ij cyclic Aivii	
47. I	n paraffin bath the temperatures in degree Celsiu	ıs are maintained at
	a) 47 – 54	
i	n) 71 - 79	
ı	o) 61-69	
	36 – 45	
		. d to
	Haemarthrosis develops within of inju	ury and is very paintul
	n) minutes to hours	
	hours to days	·
	c) days to weeks	
5 E	d) weeks to months	
40	Superficial Peronneal Nerve supplies	
	a) Tibialis Anterior	
	b) Peroneus longus	
	c) Peroneus tertius	
	d) Extensor hallux longus	
i	n the following sequence:  a) SA node → AV bundle →bundle branches → Abb) SA node → AV bundle →AV node → bundle branches bc) SA node → AV node →AV bundle → Bundle bc) SA node → Bundle branches → AV node →AV node →AV	oranches → purkinjefibres branches → purkinjefibres
	Coorde contact is such in chance thereof	
51.	What percentage of gait cycle is stance phase?	
	a) //D	
	a) 40	
	b) 50	
	b) 50 c) 60	
	b) 50	
52	b) 50 c) 60 d) 80	knee flexion
52.	b) 50 c) 60 d) 80  Normal human locomotion requires	knee flexion
52.	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees	knee flexion
52.	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees	knee flexion
52.	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees	knee flexion
52.	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees	knee flexion
<b>52.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees	knee flexion
	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees	knee flexion
	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ?	knee flexion
	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ? a) To track muscle weakness	knee flexion
	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ? a) To track muscle weakness b) To plan intensive care	
<b>53.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ? a) To track muscle weakness b) To plan intensive care c) To assess disability d) To predict who the bed-ridden patient will be	
<b>53.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ? a) To track muscle weakness b) To plan intensive care c) To assess disability d) To predict who the bed-ridden patient will be	
<b>53.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for? a) To track muscle weakness b) To plan intensive care c) To assess disability d) To predict who the bed-ridden patient will be A Gouty Arthritis usually involves first a) Ankle	
<b>53.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for ? a) To track muscle weakness b) To plan intensive care c) To assess disability d) To predict who the bed-ridden patient will be	
<b>53.</b>	b) 50 c) 60 d) 80  Normal human locomotion requires a) 30 degrees b) 60 degrees c) 95 degrees d) 105 degrees  Modified Rankin Scale is used in Stroke for? a) To track muscle weakness b) To plan intensive care c) To assess disability d) To predict who the bed-ridden patient will be A Gouty Arthritis usually involves first a) Ankle	

	a) b) c) d)	the volume of blood pumped by each ventricle per minute the proportion of blood pumped out of each ventricle during systole the product of the ejection fraction and heart rate the electrical output of the cardiac conduction system during a single cardiac cycle			
56.	a). b) c)	ich of the following is TRUE about TENS? High frequency TENS activates opioid systems Low frequency TENS activates pain gate mechanism Burst mode TENS activates both opioid and pain gate mechanism			
	d)	None of the above			
57.	The	The volume of air moving in and out of the lungs during a typical breath is known as the:			
	-	vital capacity			
	b)	tidal volume			
	•	functional residual capacity			
	d)	residual volume			
58.	The	use of ultrasound to deliver drugs transcutaneously is known as			
		Phonopheresis			
		Iontopheresis			
	•	Cavitation			
		Acoustic emission			
50	The	articulating surface of patella consists of facets			
٠,	a)	One			
		Two			
	c)	Three			
		Four			
60.		ich ligament maintains antero-posterior stability to the knee?			
	-	Collateral ligaments			
	b)	Popliteal ligaments			
	c)	Cruciate ligaments			
	d)	Ligamentum patellae			
61.	_	ger finger is due to			
	•	Tensoynovitis			
		Synovitis			
	-	Bursitis			
	d)	Fibrositis			
62.	Inju	ry to C8-T1 nerve root in brachial plexuses causes			
	a).	Klumpke's palsy			
	•	Erb's palsy			
	c)	Axillary nerve palsy			
	d)	Radial nerve palsy			
63.	\A/\$	nich organelle is the site of ATP production?			
JJ.		Nucleus			
	•	Endoplasmic reticulum			
	V.	Endopiasinio i Cuculum			

55. Cardiac output refers to

c) Mitochondria

Golgi apparatus

is (in percentage) is	
a) 100	•
b) 75	
c) 50	
d) 25	
65. What type of cells secrete insulin?	
a) alpha cells	
b) beta cells	
c) CD4 cells	
d) helper cells	
u/ neipe. com	
66. In exercise training heart rate reserve means	s?
a) 220 – Age	
b) 75 % of HR max	
d) HRmax + 30% of HR rest	
and the second s	·
67. Dorsal interossei are responsible for	
a) Adduction	
b) Opposition	
c) Abduction	
d) Extension	
	•
68. Stroke volume increases during exercise due	to:
<ul> <li>a) the Frank-Starling mechanism</li> </ul>	
b) increased ventricular contractility	
c) decreased peripheral resistance	
d) all of the above	
69 strongest ligament in the body	
a) ischio femoral	
b) round ligament	
c) pubo femoral	
d) ilio femoral	
70. Which of the following is the smallest living	structural unit of the body?
a) Atom	
b) Molecule	
<u> </u>	
•	
d) Cell	
71. Which muscle helps to unlock the knee join	t
a) Quadriceps	
b) Piriformis	
c) Popliteus	•
d) Gracilis	
72. Glasgow coma scale has subscal	es.
a) 2	
b) 3	
c) 4	
d) 5	
u, s	
	·

64. The duty factor of an ultrasound unit which is programmed to have equaled "on" and "off" periods

- 73. The most common respiratory complication in stroke is Aspiration pneumonia b) COPD c) Respiratory failure d) **Plueritis** 74. Olympic level endurance fitness is associated with an exceptionally high Hemoglobin level Oxygen saturation of the blood b) c) Vital capacity d) Resting stroke volume 75. Which of the following is NOT true about proprioception? Intrafusal spindle is a proprioceptive organ b) Knee and ankle ligament injuries reduce proprioception c) Diabetic neuropathy can cause loss of proprioception Proprioception increases in elderly 76. Which of the following is/are ambulation aids? Walker a) b) Parapodium Lofstrand forearm orthosis c) d) All the above 77. Which of the following is head CTLSO? Halo orthosis SOMI b) c) Philadelphia orthosis Milwaukee brace 78. How many nucleotides are required to code for a single amino acid? **Twenty** five b) c) three d) One
- 79. Muscles of mastication is supplied by
  - a) Glossopharyngeal nerve
  - b) Facial nerve
  - c) Vagus nerve
  - d) Trigeminal nerve
- 80. The most important care to be given in bed ridden patient is?
  - a) Assessment of contracture
  - b) Passive exercises and frequent position change in bed
  - c) Incentive Spirometry
  - d) Standing balance
- 81. Which is the pacemaker of the heart?
  - a) SA node
  - b) AV node
  - c) AV bundle
  - d) Purkinje fibres

	a)	Hemiplegic gait		•	
	b)	Freezing of gait			
	-	Ataxic gait			•
	c)	None of the above			
	d)	None of the above			
84.		erior interosseous ner	rve is a branch of		
	a)	Radial Nerve		**	
	b)	Ulnar Nerve			
	c)	Median Nerve			
	d)	Axillary Nerve			
				•	
85.	Whi	ch membrane surrou	nds the lungs?		
	a)	the pericardium	· —		•
	b)	the pleura			
	c)	the mediastinum			•
	d)	the diaphragm			•
	u)	tile dishillagili			
		•			
~~	C		gnetic energy to thermal e	anerovic seen in	•
86.				shergy is seen in	
	a)	Ultrasound therapy		•	
	b)	Short wave diather	my		
	c)	Contrast bath			
	d)	Paraffin bath			
87,	A be	ed bound patient with	n non-blanchable erythem	na, with intact skin over sacrum is	•.
	a)	Stage I pressure ulo	er		
	b)	Stage II pressure ul	cer		
	c)	Stage III pressure u	ılcer		·
	d)	Stage IV pressure u			
	-,		•		
22	Wha	at hormone does the	thyroid produce?		
80.	a)	thyroid stimulating			
	•	calcitriol	Hormone		•
	b)	· ·	•		
	c)	thyroxine	<b></b>		•
	d)	parathyroid hormo	ne .	•	
			•		
89.	Shift	ing of mediastinum t	o right may occur in		
	a)	Right collapse			
	b)	Left collapse	•		
	c)	Right pleurisy			
	d)	None of the above	•		
	u,	TOTAL OF THE GOOTE			

Page 11 of 13

82. The normal cadence is

40 -50

70-80

150-160

110-120

83. Laser canes can be useful in

a)

b)

c)

d)

- 90. Which of the following motions is identified with the corresponding action? (Action-Turning palm of hand over to face in the anterior direction, dorsum of the hand is pointed downward toward the floor.)
  - a) Pronation
  - b) Supination
  - c) Abduction
  - d) Adduction
- 91. Which is not true for percussion
  - a) It is done with fingers and thumb adducted
  - b) The sound of percussion should be hollow sound
  - c) The rate of percussion between 100-475 times per minute.
  - d) The dominant hand pressure is more than non dominant hand
- 92. A newborn baby exhibits a reflex that includes: hand opening, abducted and extended extremities following a jarring motion. Which of the following correctly Identifies the reflex?
  - a) ATNR reflex
  - b) Startle reflex
  - c) Grasping reflex
  - d) Moro reflex
- 93. What is a nurse attempting to minimize by getting close to a patient during amanual handling procedure?
  - a) the load arm
  - b) the size of the fulcrum
  - c) the effort arm
  - d) the patient's weight
- 94. Which structures constitute the "upper respiratory tract"?
  - a) nose, pharynx and larynx
  - b) larynx, epiglottis and bronchi
  - c) trachea, bronchi and bronchioles
  - d) terminal bronchioles, alveoli and pleurae
- 95. The benefits of aerobic training are all EXCEPT
  - a) Decreases the myocardial oxygen demand for given load
  - b) Decreases peripheral resistance
  - c) Increases stroke volume
  - d) Increases the maximum heart rate
- 96. Acapella and flutter are devices with
  - a) Positive expiratory pressure
  - b) Forced expiratory pressure
  - c) Manual hyperinflation
  - d) Active cycle of breathing
- 97. The term "cellular respiration" is applied to:
  - a) exchange of gases in the lungs
  - b) ventilation of the lungs (breathing)
  - c) exchange of gases in the body tissues
  - d) the production of ATP in the cells

- 98. The position of the lung is up to
  a) T8
  b) T10
  c) T12
  d) T7
- 99. A patient has fallen off a bicycle and fractured the head of the proximal fibula. A castwas placed on the patient's lower extremity. Which of the following is the most probable result of the fall?
  - a) Peroneal nerve injury
  - b) Tibial nerve injury
  - c) Sciatic nerve injury
  - d) Femoral nerve injury
- 100. In what part of the kidney are the glomeruli located?
  - a) In the cortex
  - b) In the medulla
  - c) In the hilus
  - d) In the minor calyces
